

204 Bliss Lane

This is a second story addition and a rear addition to an existing 1100 sq foot house.

Rear addition requires a variance for side yard and the house is already non-conforming.

Second floor will have a Master Suite and office. Ground floor contains kitchen/LR/DR and two bedrooms and one bathroom and will be renovated with new kitchen and bath.

Pool is in conceptual stage and may be eliminated.

The goal of this renovation is to achieve a zero footprint residence that will include heat pumps and solar panels as well as highly energy efficient windows and insulation.
