Fence Permit Application

To the ARB,

My husband + I are applying for a fence permit. We want to install a 6' high deer fence. It will have 4x4 pressure treated posts, set 8' apart. The 2" x 4" black welded wire will be made stable, top & bottom, with a tension wire.

The purpose of the fence is to discourage deer from entering the property. The style of the fence has been chosen for its simple good look and for its quality. The layout, also for its simplicity & not to distract with unnecessary lines. In keeping with this goal, we chose to follow the outside edge of the property & to continue the line across our driveway. An automated gate with all safety features included, will be 14' wide & open into the property (the east). The pedestrian gate at it's side will be 4' wide. The large gate will have remote capability as well as a push button. The style of this large gate will be like the other gates: basic, posts with wire, nothing fancy.
